

Cycling Shoe Wall Mount - Instructions

-Installation-

- 1) Wall Mount will fit all current Shimano cleats; SPD & SPD-SL, and most clones. SPD cleats are designed for a snug fit to allow for wear they may not fit all the way into the retaining notch this is normal.

If for whatever reason your cleat does not fit, please contact us with photos and information and we will update the design accordingly and ship you a fitted version.

- 2) Prepare the area, the kit comes with screws (use if mounting directly to a wall stud) and drywall anchors.
- 3) Lay the mounts flat on the floor, place the shoes over the mounts to determine how far apart the holes need to be spaced. Then determine where to drill the first hole.
- 4) Use the diagram on the second page as a template to drill, make sure the template lines are vertical. The holes are 42mm or 1.9" vertical spacing, if you prefer to measure manually.
- 5) Drill the pilot holes with a 3/16-inch (5mm) drill bit (not included).

-Use-

- 1) SPD - Place shoe and cleat into mount at a "heel down" angle, slide downwards until seated. The sole should end roughly parallel to the wall.
- 2) SPD-SL -Place shoe and cleat into mount at a "toe down" angle, just like into the pedals. Then push the heel towards the wall, then gently pull down. There should be a slight click.
